

Alertable for Workplace

BRIEF OVERVIEW

Alertable for Workplace is easy to use, low cost, exceptionally capable mass notification software that works with Microsoft Teams. Alertable saves time sending alerts and general notices for workplace incidents and events such as building fires and floods, facility closures, short shifts, equipment outages, spills, leaks and releases, structural breaches and collapses, accidents, danger areas and more.

**MADE IN CANADA
FABRIQUE AU CANADA**

Easy to use. LOW COST.

**Workplace Critical
Event Management**

**Better communications,
Less business disruptions,
Safer workplaces**

- Works with Microsoft Teams, simple add-on
- Battle-tested and proven technology
- Pays for itself after one significant emergency
- Useful for drills and exercises as well as real events

Microsoft Teams

Alertable is useful for real emergencies, drills and exercises. It can help account for everyone faster and more accurately. It can be used to assign tasks based upon roles for incident response saving time from having to look up those responsibilities in incident response plans. Company-wide status updates, conference calls, meetings and one-on-one communications can be done easily in one common place.

Alertable can also save time preparing after-action reports for internal post-mortems, compliance reporting and claims. When an alert was sent, how many people were accounted for and how long it took, the action steps taken at what exact time are all tracked automatically in Alertable and can be easily exported for fast reporting.

Alertable for Workplace builds on the technology available in the highly popular Alertable for Communities software. Alertable serves more than 1,300 communities and a total population of 10 million in Canada, more than any other competitor. Alertable is clearly the preferred choice of public officials, and the public, as reflected in Alertable's 4+ star rating by both groups.

Alertable also works with other software, including DisasterLAN (DLAN), Web EOC, Lightship, ESRI, Municipal511 and more. Integration with these software products provides efficiencies and improves the effectiveness of your teams and operations by automatically incorporating notification information into systems you may already be using.

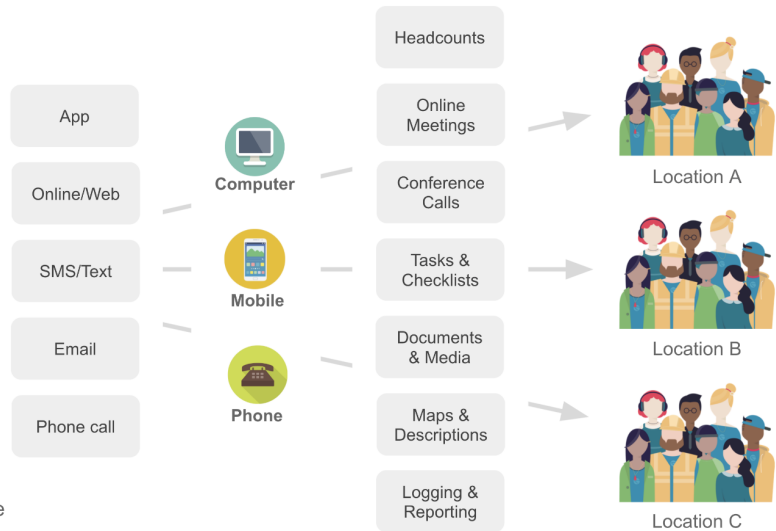

Save Time & Money

Take less time to run drills and respond to real events

Safer Workplaces

More accurate headcounts, clearer communications and more standardized response

Public alerts are provided in the FREE version of Alertable for Workplace. Alerts sent by public officials for communities where businesses are located can help to keep staff and business operations safe and informed of natural disasters, severe weather and other public safety alerts happening around the workplace. Simply add the Alertable app to Microsoft Teams from the Microsoft AppSource store and start using for FREE: <https://peasi.com/workplace>.

There is an option to upgrade to a paid version for company officials to send their own workplace related alerts and to benefit from additional features including conducting virtual head counts, holding meetings, assigning tasks, and more. Contact us for more information.
